Strap Pump

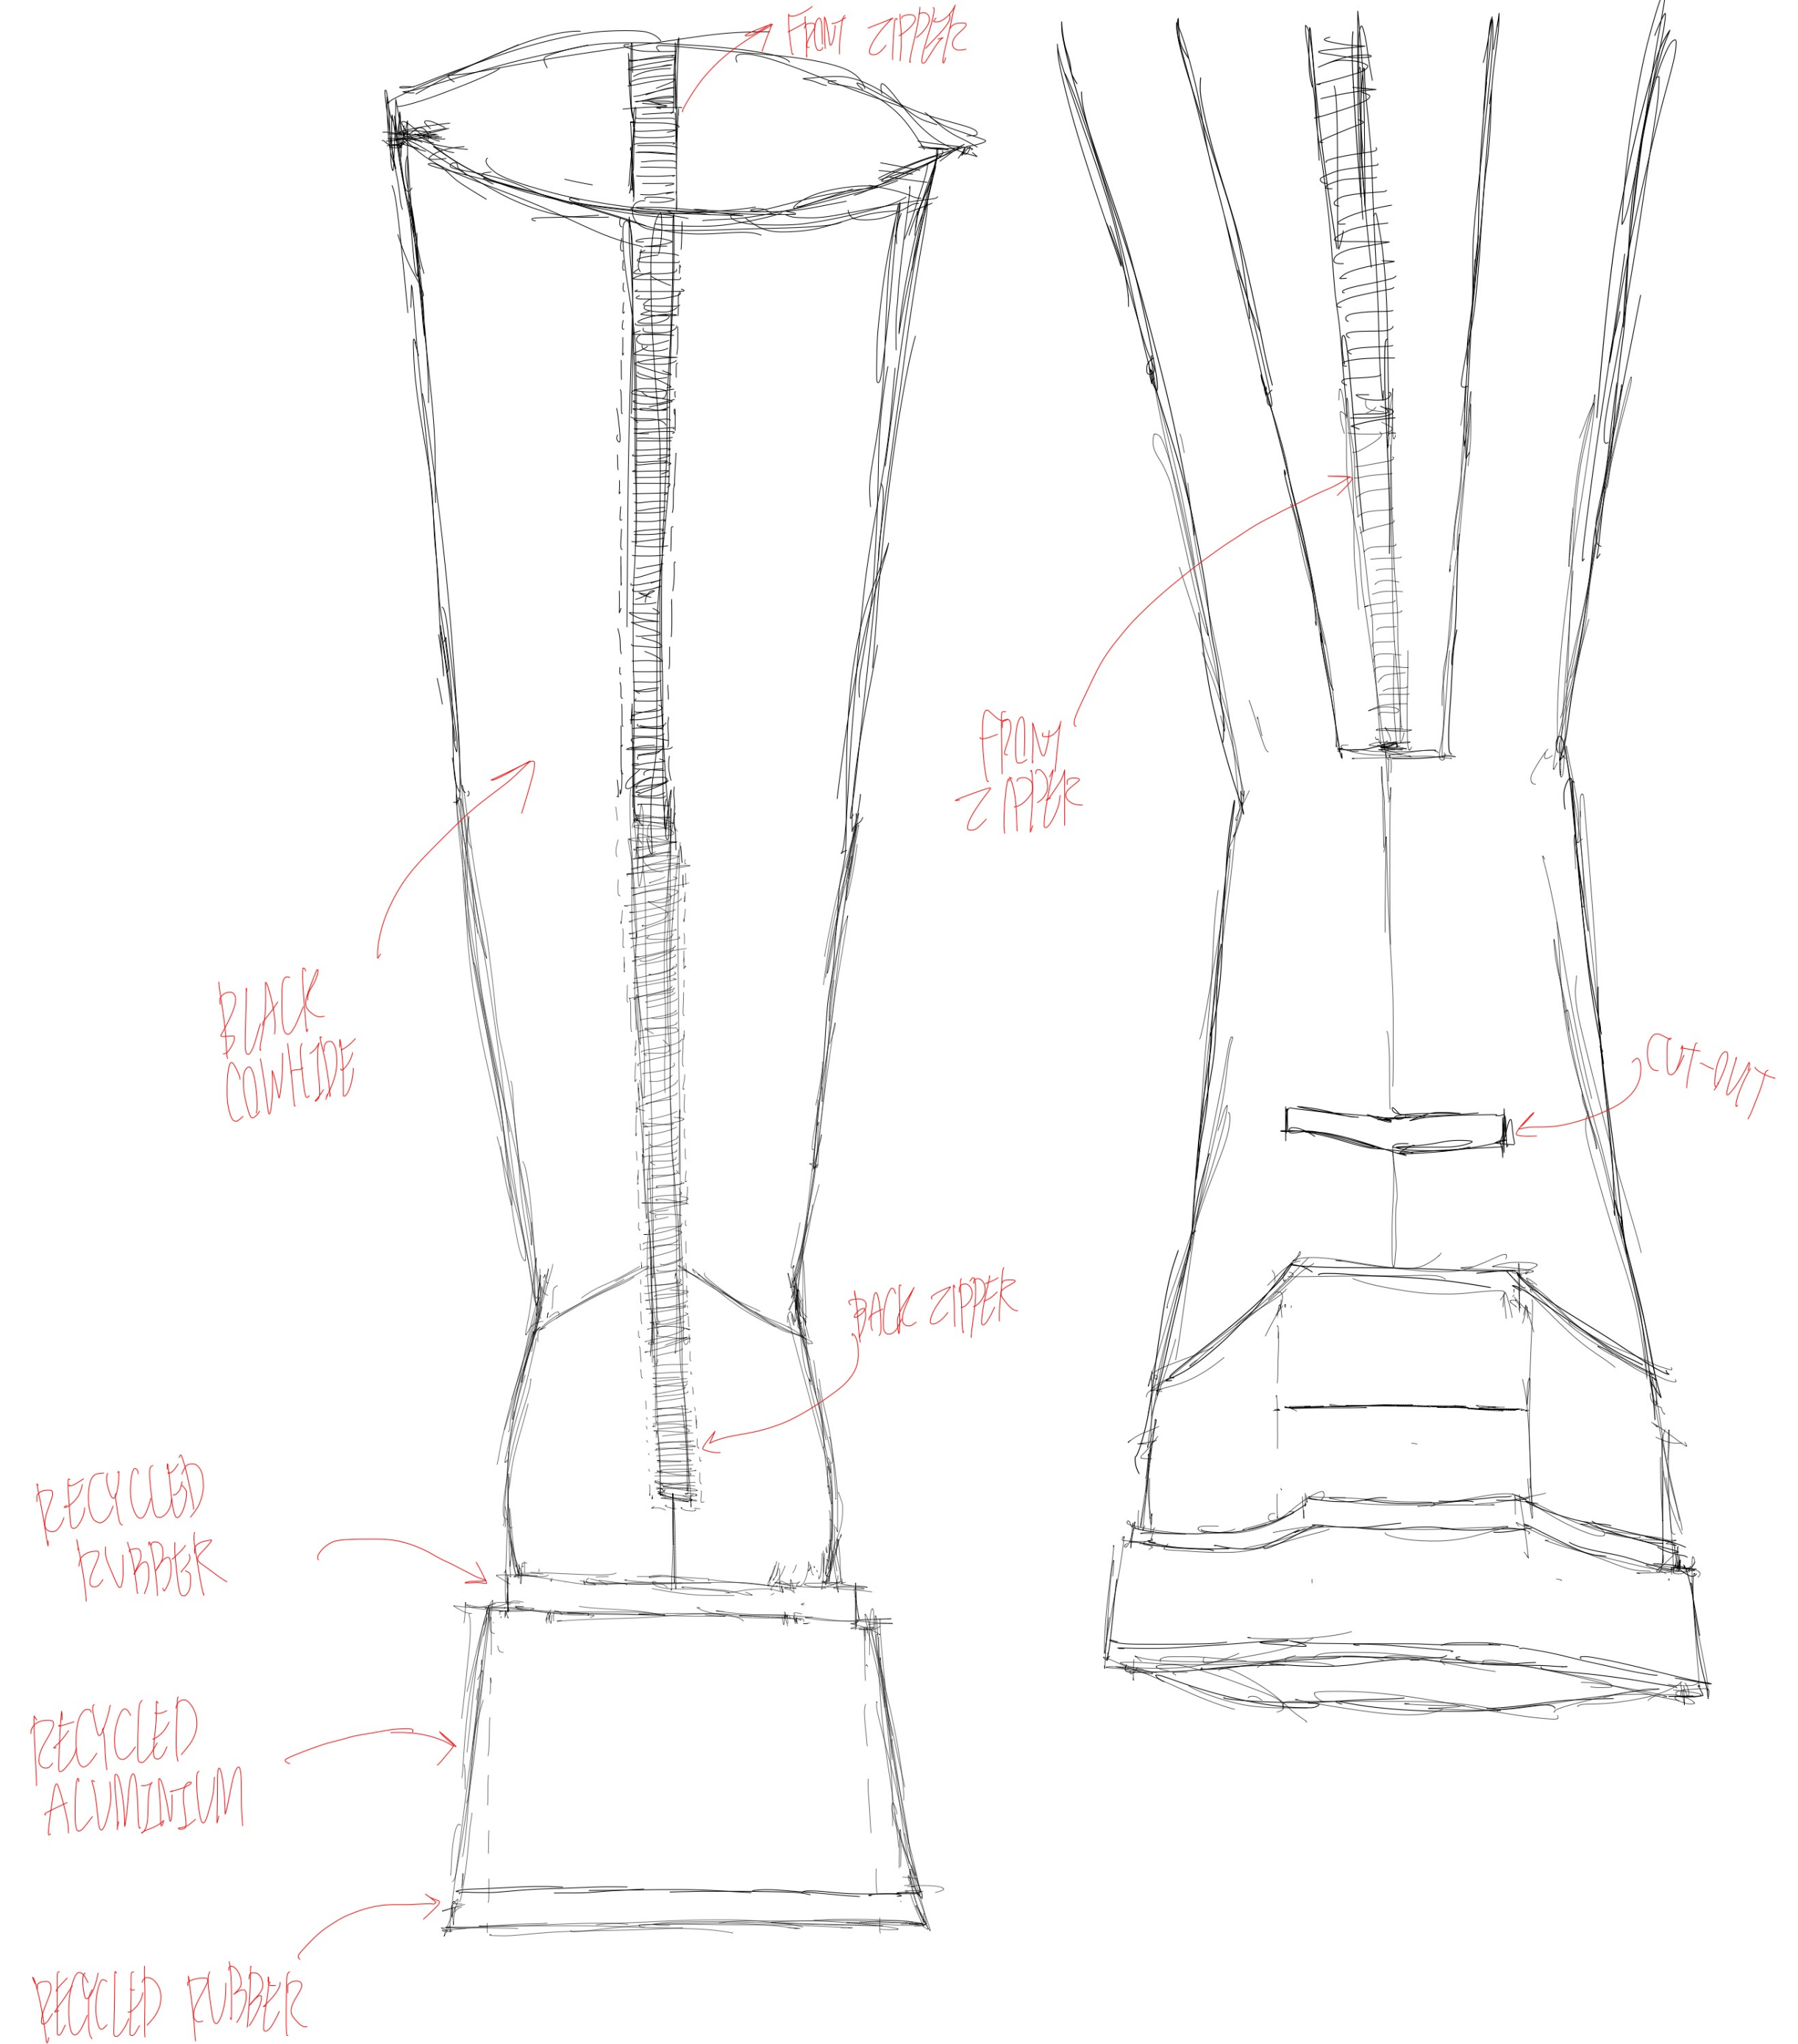

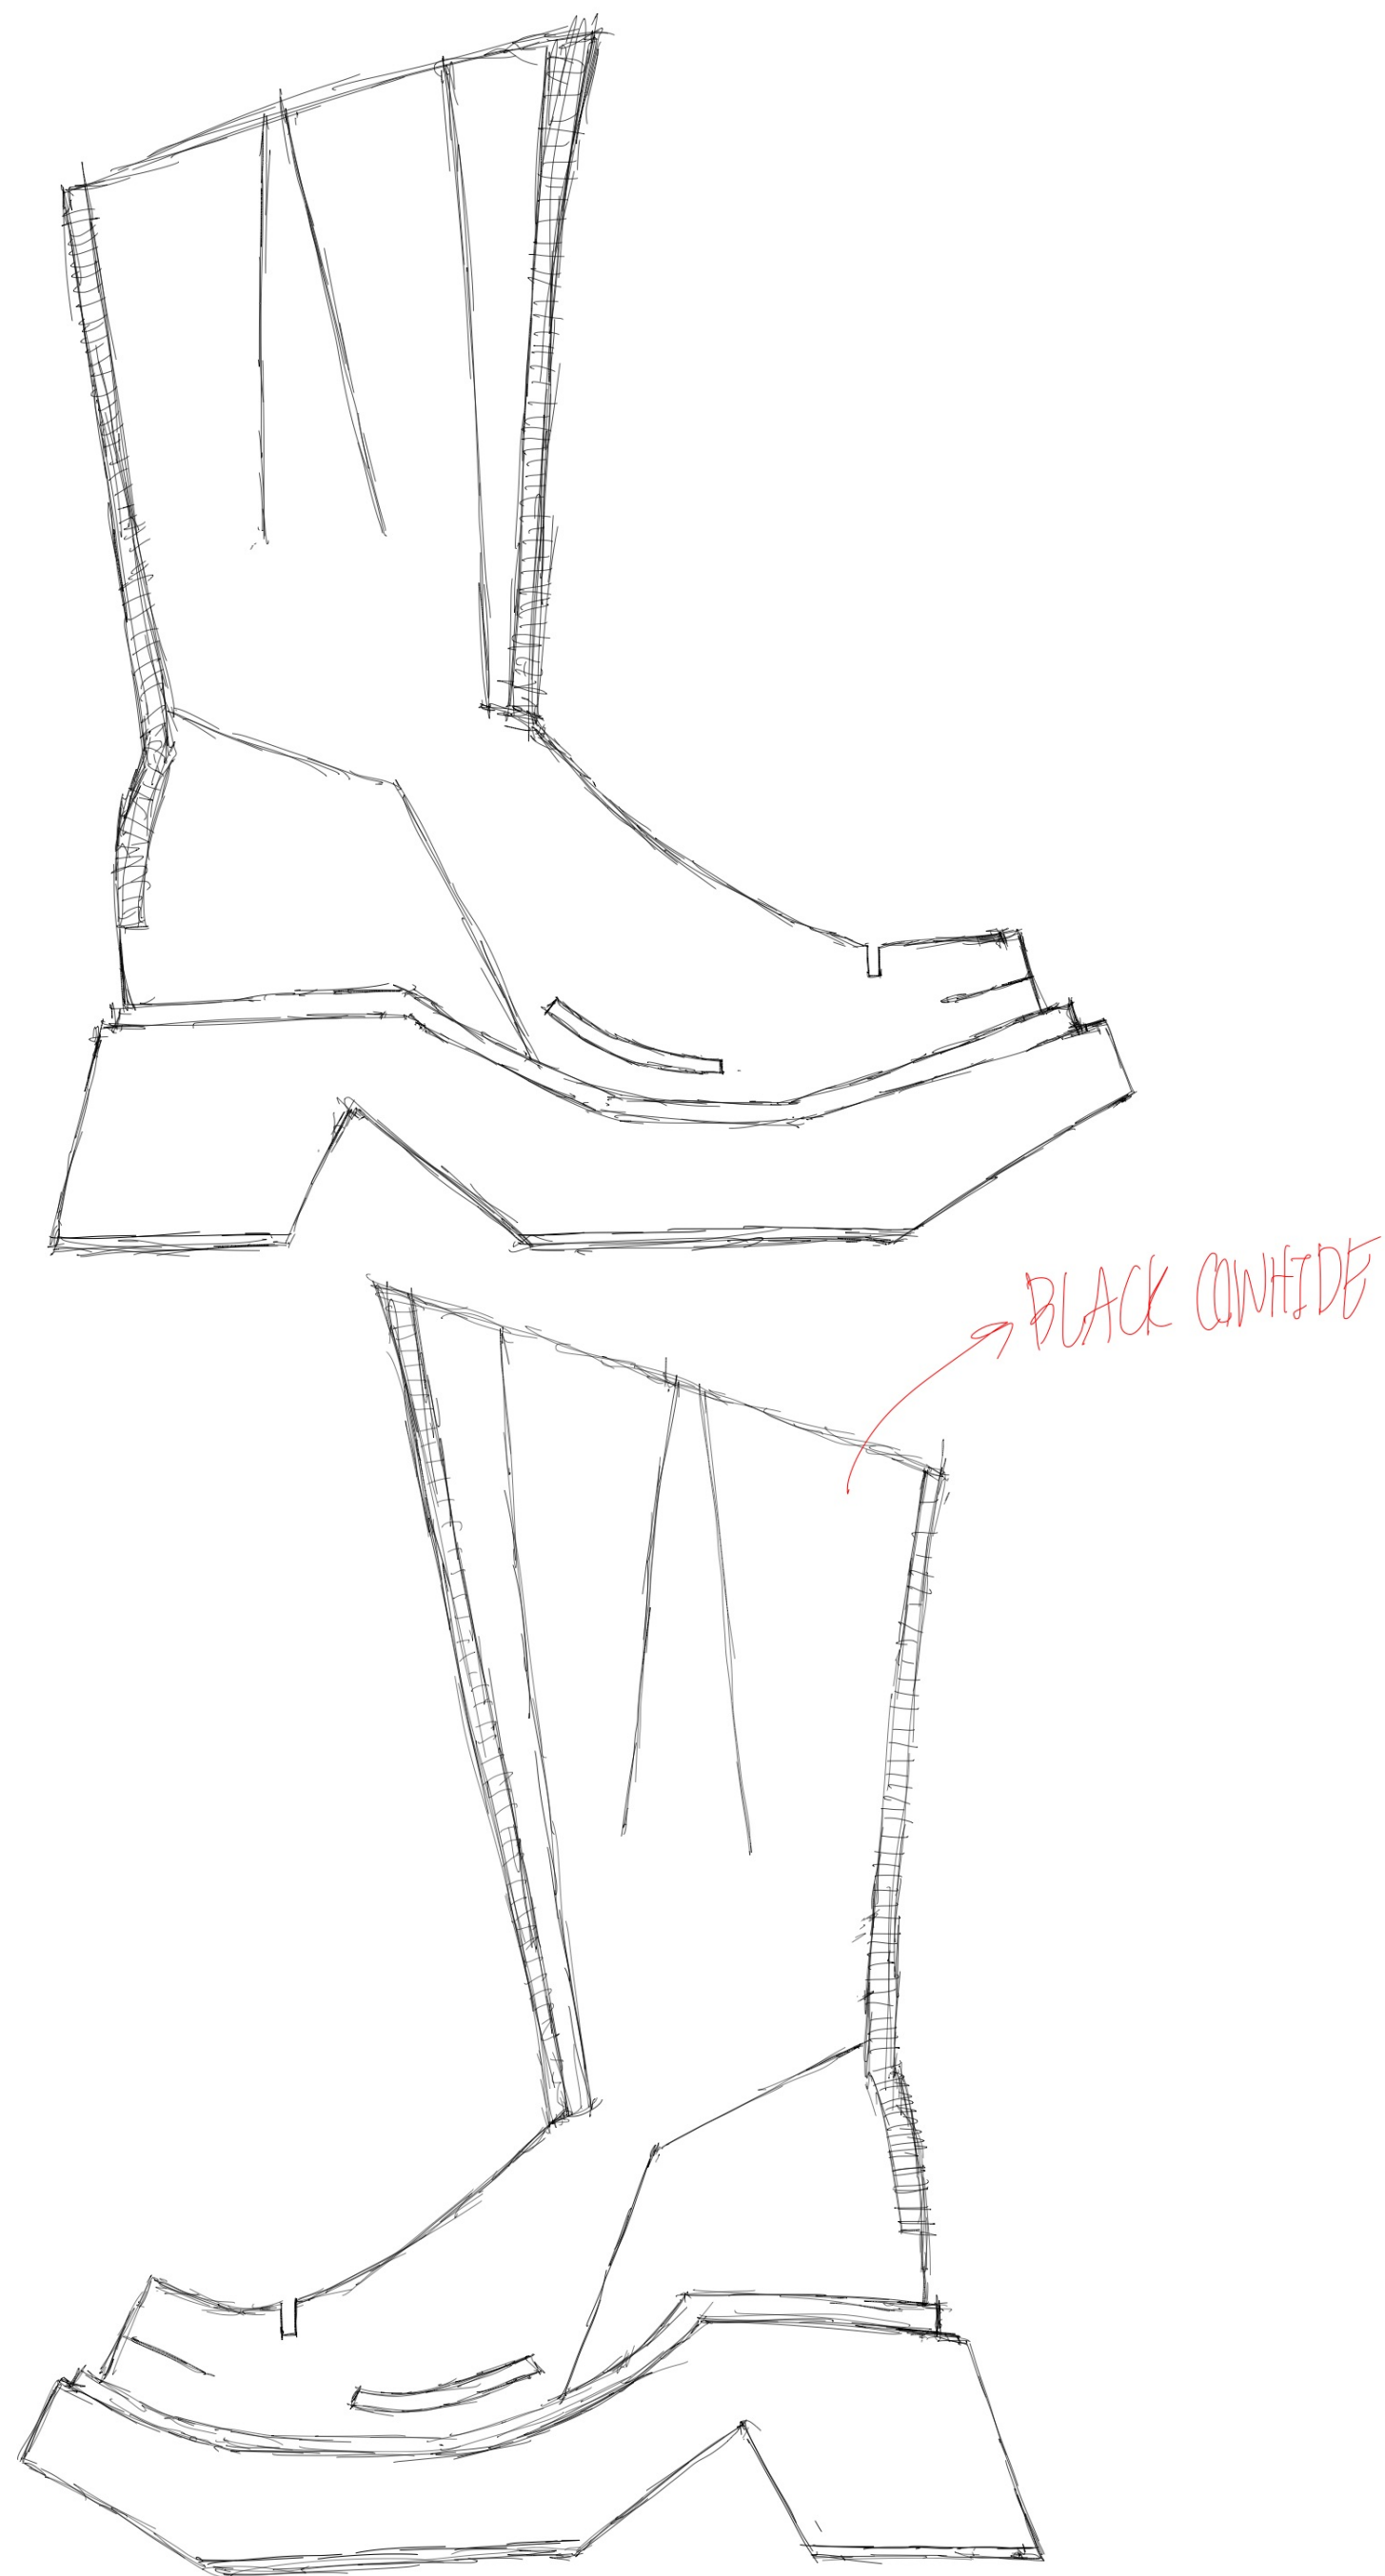

Knee-high Boots

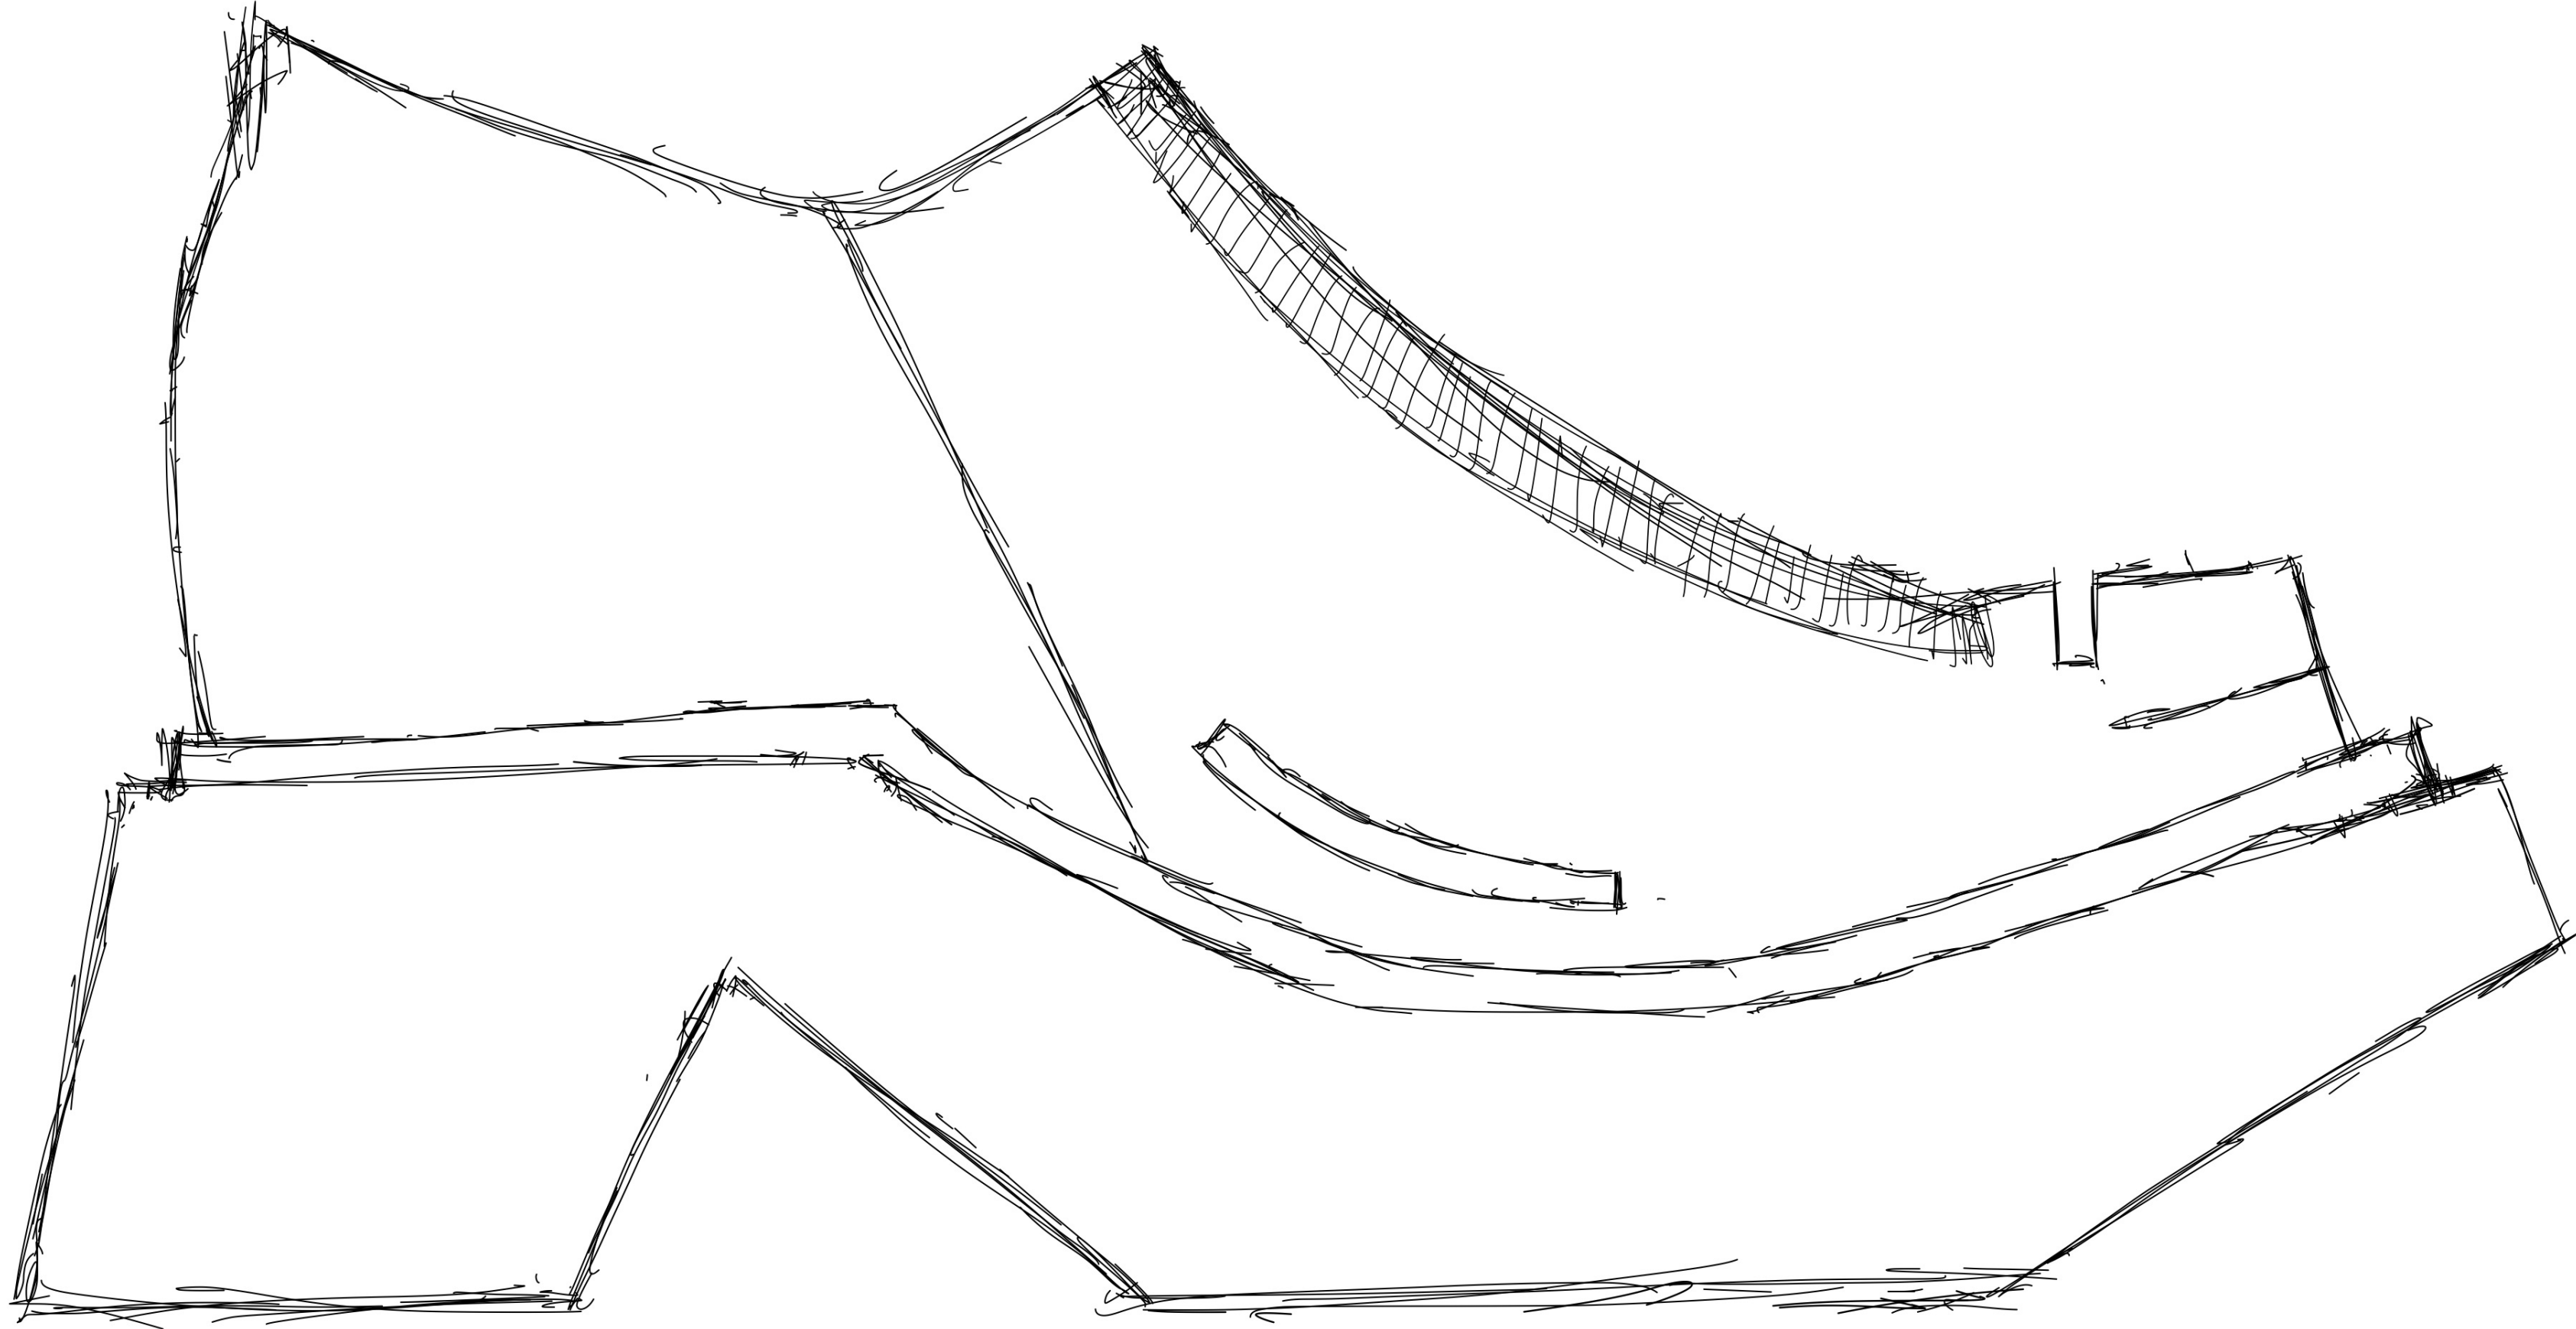

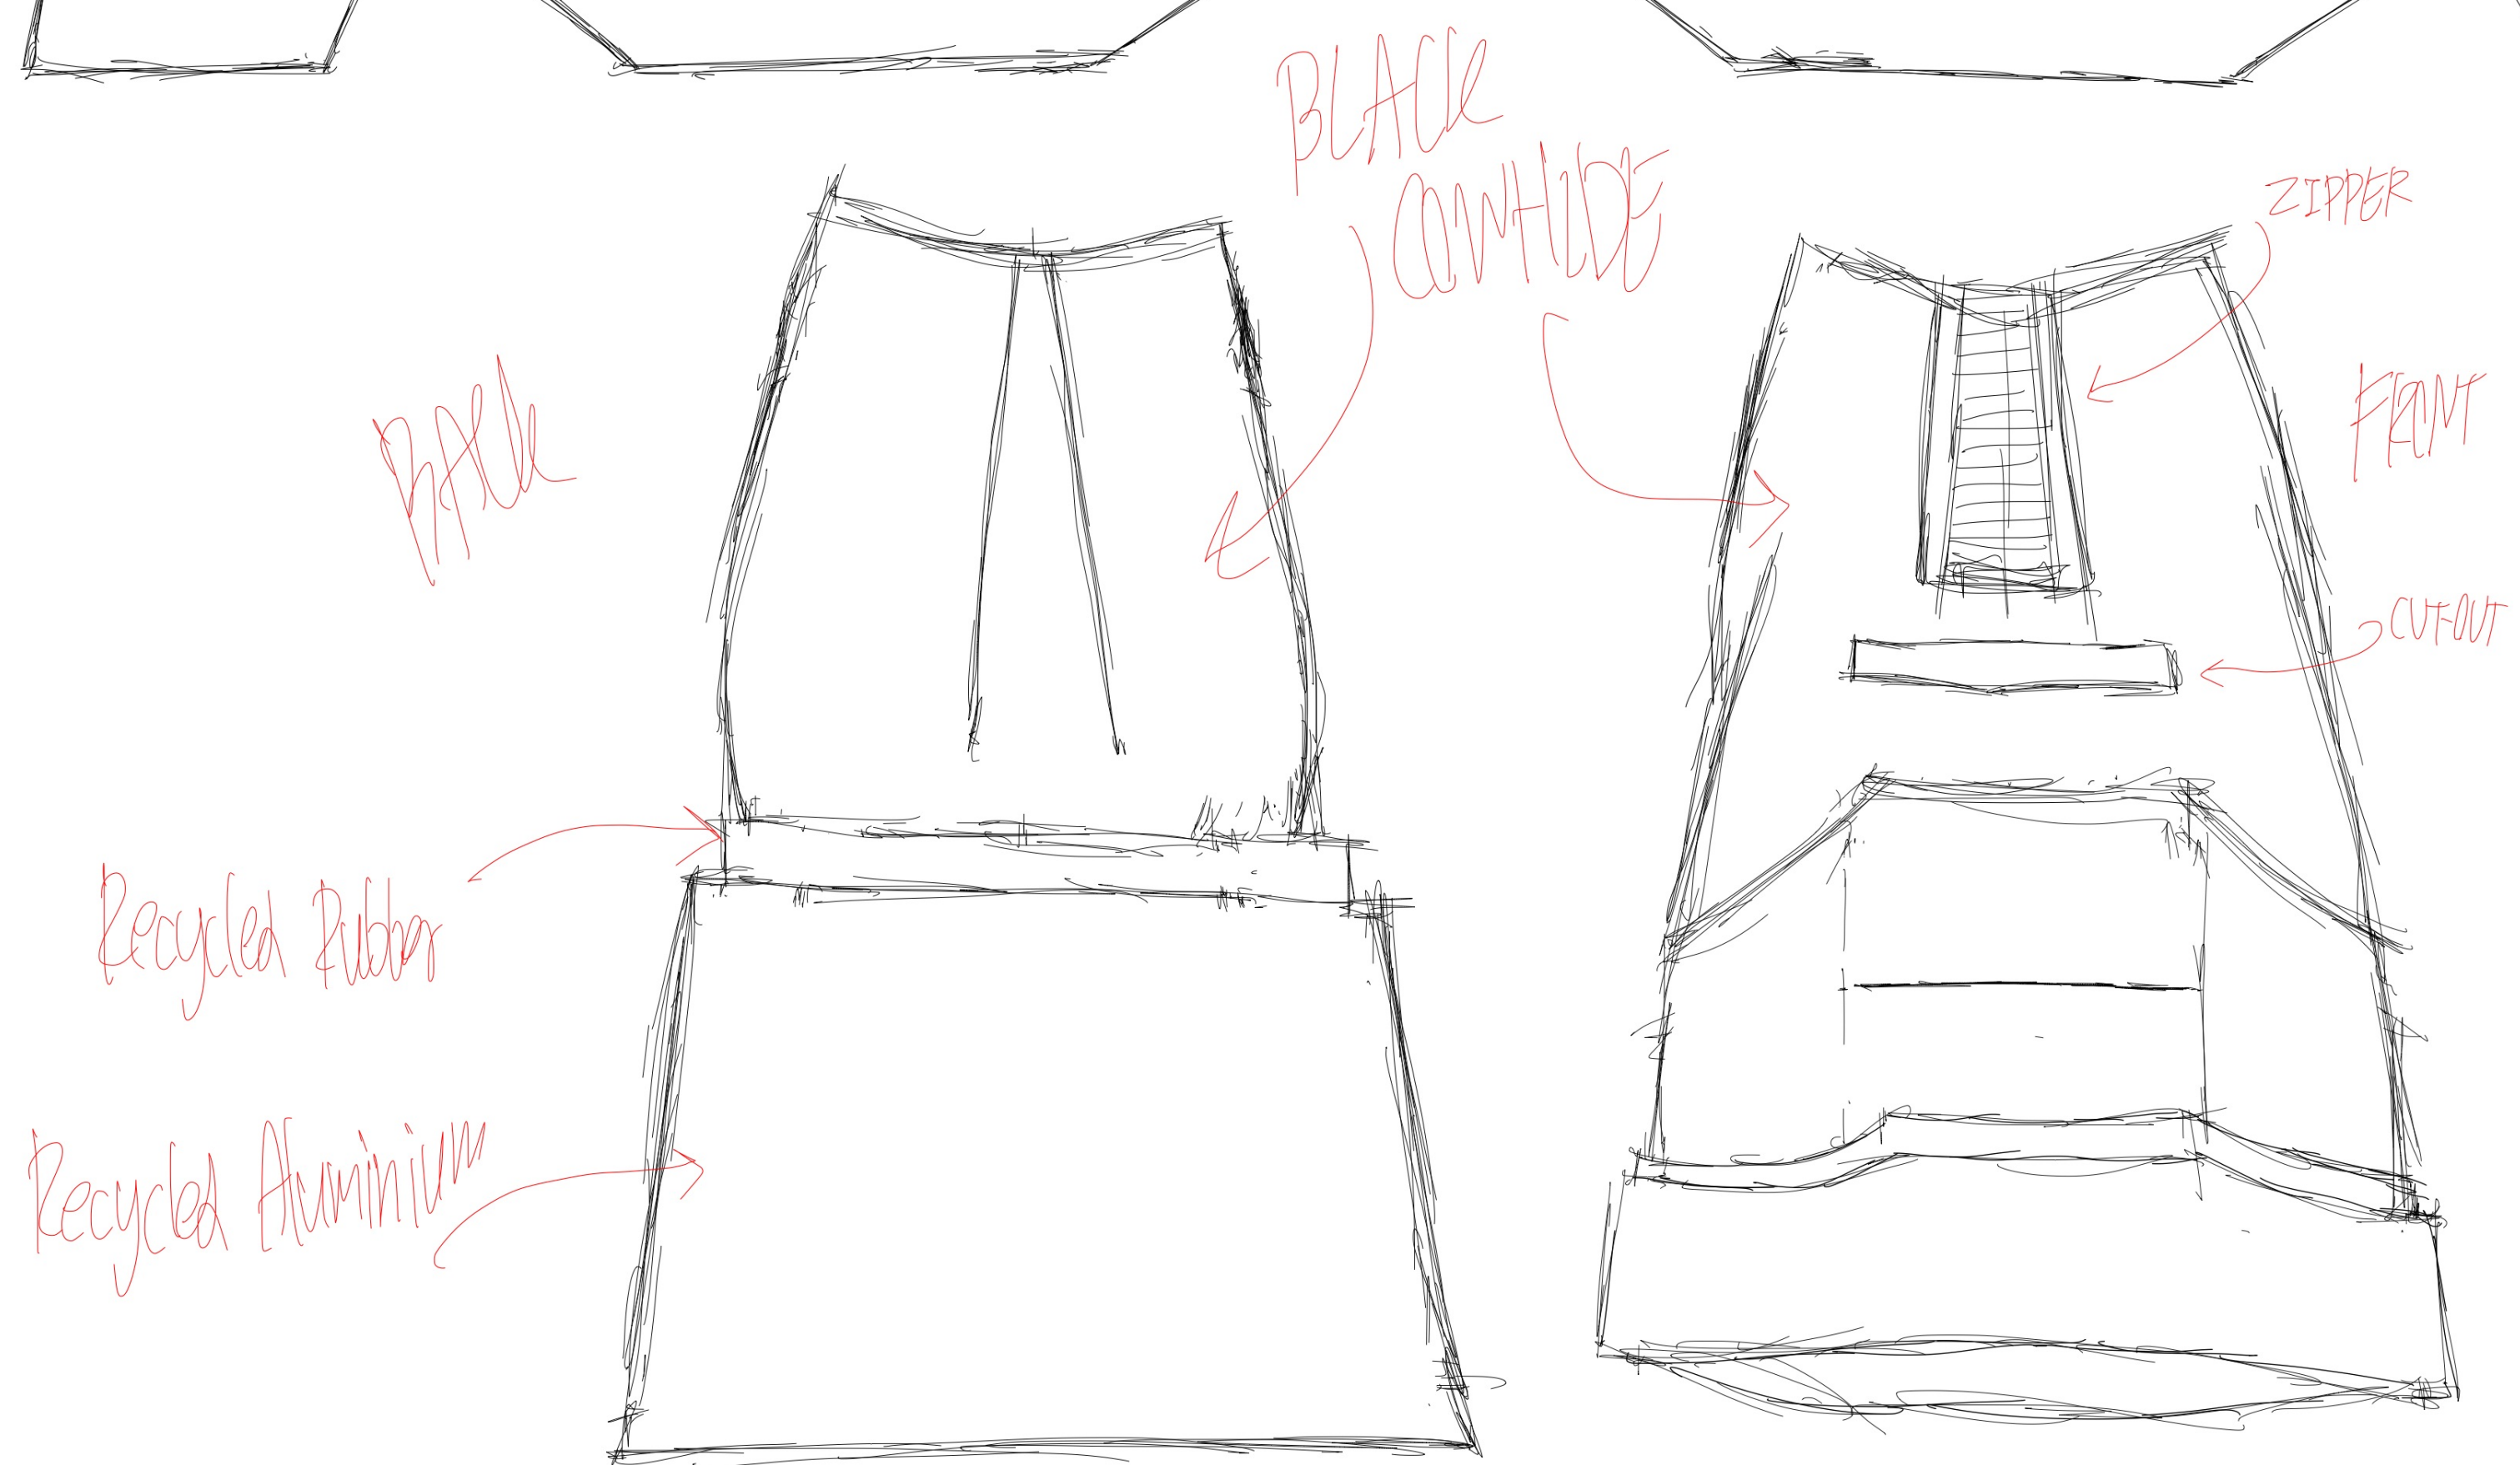

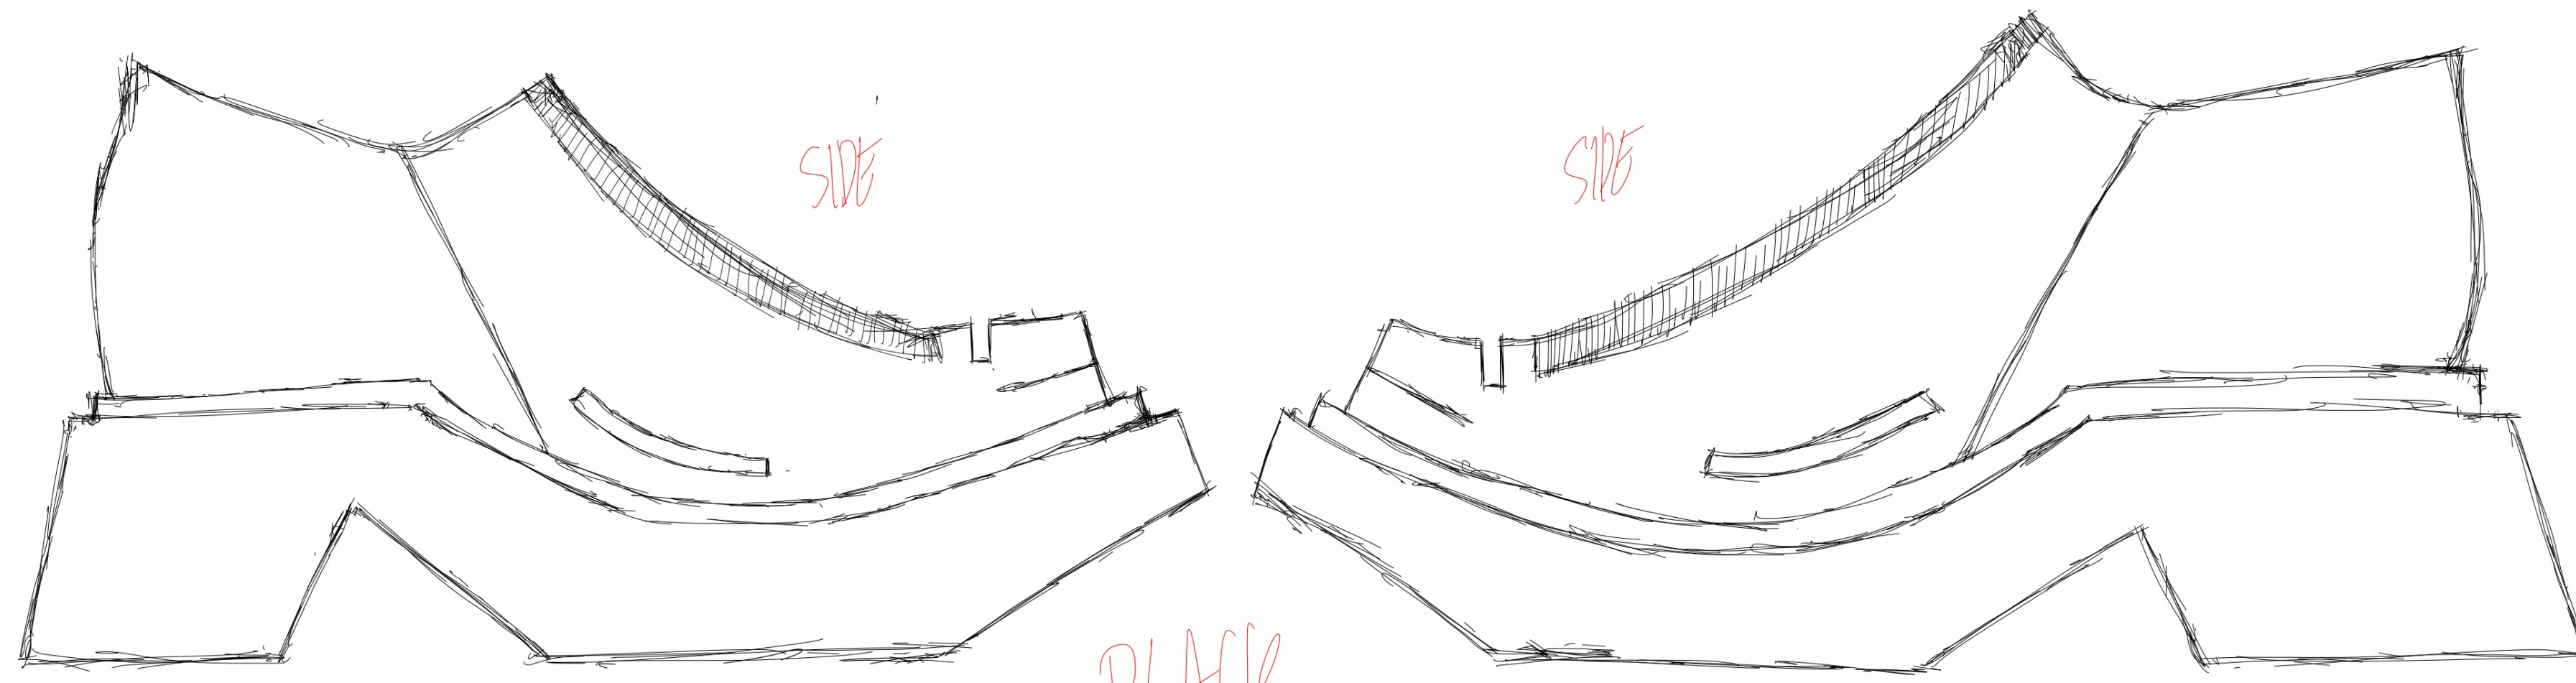

Tall Combat Boots

Combat Derby

List of Materials Used

I aim to use only sustainable or recycled materials to craft the shoes.

- **Ethically sourced smooth cow leather** is the primary material for the upper. Compared to synthetic alternatives, it has a lower environmental impact, offering greater sustainability when responsibly produced. Its natural durability, breathability, and timeless aesthetic make it an ideal choice for long-lasting, conscious design. The same leather is also used for the insole, providing enhanced comfort, extended wear life, and natural shock absorption, reducing the need for frequent replacements and minimizing waste.
- **Recycled aluminum**, derived from post-consumer sources such as used cans and reclaimed stainless steel, is used for the midsole. This not only diverts valuable materials from landfills but also reduces the energy footprint compared to virgin metal production.
- **Recycled rubber** is chosen for the outsole to ensure both resilience and sustainability. Whenever possible, we prioritize upcycled rubber from discarded tires, giving new life to materials that would otherwise contribute to long-term environmental waste.
